

Great smiles start at the gum line.

The OxyCare™ 3000 flushes away food residue from between your teeth and gently massages below your gum line *where regular flossing can't reach.*

OXYCARE™ 3000

For over 20 years, Oxyfresh has been the leading provider of dental products asked for by dental professionals. The OxyCare™ 3000 Oral Irrigator (#651) uses hydromagnetics and 3,000 water pulses per minute to completely clean your teeth, mouth and gums. After just one use, your mouth and breath will feel fresh and clean.

Designed to complement your daily oral hygiene program, the OxyCare™ 3000 sends a charged solution of Oxyfresh Mouthrinse (sold separately) and warm water throughout your mouth, reducing plaque and removing debris. This amazing product is safe for the whole family to use and many OxyCare™ 3000 users say their teeth and gums feel like they've been professionally cleaned. Each OxyCare™ 3000:

- Is 40% more effective than irrigators found in stores
- Breaks up and removes deposits below the gum line
- Leaves your mouth feeling fresh and clean
- Uses patented hydromagnetic technology to help reduce plaque buildup
- Can be used with powerful Oxyfresh Mouthrinses to clean and deodorize your mouth completely
- Comes with a 100% unconditional satisfaction guarantee

"I chose two of my most challenging patients to demonstrate effectiveness of the OxyCare™ 3000 Oral Irrigator. In just one month's time, both showed incredible tissue response without touching one shred of floss! It also works great for those with orthodontic brackets. Finally, a way for patients to protect their investment!"
